Abstract (en)

[origin: WO02061558A2] The invention comprises the visual presentation of electronic signals, informations, pictures or data that are produced, processed, transferred or received on the portable electronic device on the display/screen that can be folded or unfolded in several parts. By folding the display/screen the required small total dimensions of the portable electronic device and the display/screen as a whole are obtained. The entire width of all individual displays/screens is related to the entire height of all individual displays/screens by the ration 4:3 of the entire picture. At that, the electronic signals, informations, pictures or data are divided in as many individual parts of the whole as many there are displays/screen. For the visual presentation of the electronic signals, informations, pictures of data according to this invention the already known and existing hardware and software can be used.
