Abstract (en)

[origin: WO03091956A1] The invention relates to a method for monitoring access in manufacturing plants that comprises the following steps: defining access-controlled areas in a manufacturing plant into which defined objects should not enter; applying a transponder to a container, whereby the transponder carries an item of information regarding the contents of the container; providing base stations in the access-controlled areas and using the base stations to detect when a container approaches an access-controlled area into which the contents of the container should not enter, and; indicating the prohibited approach of a container. The invention also relates to a device for carrying out this method.
