Abstract (en)

[origin: EP1498531A1] A warp loom has a pattern lay-up bar (1) with a thread guide (2) coupled to a draw cable (3) and movement regulator. The movement regulator motor (4) is coupled only to one end of the pattern bar (1). The motor (4) has a drum (8) to which one end of the cable is attached. A return spring (5) is attached to one end of the pattern bar. The drum (8) circumference is greater than the thread guide maximum movement range. The drum diameter is at least 30 mm. The draw-cable (3) is attached by a ring at one of a number of alternative clamped positions inside the drum, via an aperture in the outer shell.
