Abstract (en)

Dual flush pneumatic pushbutton for toilet discharge mechanisms. <??>This consists in the pushbutton strictly speaking consisting of a pump formed of a piston and sleeve which communicates with a corresponding bellows or piston in the discharge mechanism. The pushbutton is fitted with a single joint and has two parts, one larger and one smaller. The larger part is for a greater flush pulsation and the smaller one, for a partial flush pulsation, is activated by a rod constituting the limit for this. Internally it has a recovery spring in the chamber for the large pushbutton and a recovery spring for the smaller pushbutton. <??>For application in manufacturing pushbuttons for toilet flushing mechanisms. <IMAGE>
