Abstract (en)

[origin: EP1498579A1] The device has a split ring arranged in a recess (7) and having a rod (8) placed between bottom of an end cover (5) and a flange (13), and a peripheral surface against an annular base. The surface and the flange have notches (30a, 30b) opening radially towards outside and receiving prongs of the rod. The prongs are concealed in the edge of the flange during assembling or disassembling of the cover.
