Abstract (en)
[origin: EP1498857A2] A method and apparatus for changing an appearance of a displayed mechanical device on a gaming machine is disclosed. The displayed mechanical device may be a plurality of mechanical spinning reels, a mechanical wheel, or mechanical dice. The method includes receiving a wager to play a wagering base game, detecting a first indication to play a special feature game and, in response to detecting the first indication, changing an appearance of the displayed mechanical device. The special feature game may be a bonus game or any other secondary game offered by the gaming machine. The appearance change preferably includes changing a color of the displayed mechanical device using an illumination source. The method further includes detecting a second indication to terminate play of the special feature game, and in response to detecting the second indication, restoring the appearance of the displayed mechanical device. <IMAGE>
