Abstract (en)

A battery clamp (1) comprises a conductor body (4) and means (5) for clamping onto a battery terminal (2). The conductor body (4) comprises a split ring (6, 7) which can be coupled with the battery terminal (2) and has portions (19, 20) which can be moved towards one another and on which the clamping means (5) act order to squeeze the split ring (6, 7) and to bring about the clamping of the conductor body (4) onto the battery terminal (2). The clamp (1) is characterized in that it comprises a lever (21) which can be pivoted between an open position and a closed position and which has a cam (24) operatively associated with the clamping means (5) in order to bring about the clamping of the conductor body (4) onto the battery terminal (2) by pivoting of the lever (21) from the open position to the closed position. <IMAGE>
