Abstract (en)
[origin: EP1499161A2] A sound field control system measures impulse response in a playback sound field, calculates the binaural level difference expressed as the ratio between the ensemble mean values of signals to two detection sections installed at the positions corresponding to both ears, and sets the coefficient of the digital filter of a sound source correction section so that the error between the binaural level difference in a target sound field and the binaural level difference in the playback sound field becomes equal to or less than a predetermined value. The sound source correction section makes correction to an audio signal of a low frequency band so that the error between the binaural level difference in a target sound field and the binaural level difference in the playback sound field becomes equal to or less than the predetermined value.
