Abstract (en)

[origin: WO03093063A1] The invention concerns a sealing panel, in particular for motor vehicle door, comprising at least a compact or cellular plastic material sheet (10) and an adhesive material tape (14) deposited on one side of the panel along one part at least of its periphery. The tape (14) has an elongated or rectangular cross-section, with a thickness less than its width, and maintains a substantially constant width over its entire length. The tape is preferably made of compact or substantially compact material to reduce accidental risks of bruise.
