Abstract (en)
[origin: WO03091140A1] The invention relates to a textile machine, particularly a false twist crimping machine equipped with a thread transport system (14) for the threads (8) that continuously accrue in the event of a thread breakage or a bobbin change. The invention provides that the negative pressure in the thread transport system (14) is generated by a jet apparatus (20) supplied with a gaseous working substance. The accumulating thread waste is conveyed by the jet apparatus into a collecting receptacle (21), which also serves as a thread store while being detachably attached as an easily exchangeable thread waste bag that, for improving recycling, is made of the same polymer as the thread remnants collected therein.
