Abstract (en)
[origin: WO03091525A1] A system (4) for delivering a spoiling agent onto a plurality of media such as bank notes, wherein the media are contained in small bundles within individual plastic packages (3) inside a cash box (1). The system comprises one or more probes (9) attached to an actuator (8). When security of the box is compromised, pressurised gas from a container (6) pressurises the spoiling agent held within a reservoir (7). The spoiling agent enters the actuator such that the probes move against the packages and penetrate them. The spoiling agent then enters the packages through the probes.
