Abstract (en)
[origin: US2004030699A1] The invention relates to a system for the management of information, and in particular medical information, each item of information concerning a first entity and having been generated by a second entity. It comprises: means for creating at least one event bringing together in an indissociable manner in one and the same data item: the or each item of information concerning the first entity; an identifier of the first entity; and an identifier of the second entity; and means for automatic creation, according to the specifications of the said protocol, of at least one event corresponding to a subsequent operation to be carried out as a function of the result of an analysis of the or each item of information contained in at least one preceding event as a function of the criteria specific to a predetermined protocol.
