Abstract (en)

It is applicable to engines equipped with a flywheel and to aeroplane propellers and comprises an oblong handle (2); a first braking element (3) of the flywheel, arranged at the first end (4) of the handle and comprised of an appendage (5) of the handle, equipped, at its free end, with a cavity (6) in the shape of a portion of cylinder of little height and with its radius essentially equal to the external radius of said flywheel, adapted to be coupled to the latter; and, a implement (3', 8) arranged at the second end (7) of the handle, preferably a plug wrench. It can likewise comprise two polygonal-head socket wrenches (9, 10), positioned at opposite ends of the handle (2), positioned adjacent to the braking element (3), with the first braking element (3) arranged with a certain angularity in relation to the oblong handle (2). <IMAGE>
