Abstract (en)

[origin: EP1500567A1] A process resolves the problem of conflicting rights of way (S0, S1, S2) for tracked vehicles e.g. railway system. The system has a series of resolution strategies (M1, M2, M11, M12, M22) that are based on past experience and which are known to result in given outcomes, while taking into account a group of desirable factors (11). A quality factor is determined for each of the possible solutions before selecting the best choice (11).
