Abstract (en)  
[origin: WO9964654A1] The invention relates to a weaving reed (60) comprising a plurality of lamellae (61) which are adjacently arranged in a row. The ends of said lamellae are held in a lower profile (62) and in an upper profile (8). According to the invention, the lamellae at least comprise a width of approximately 6 mm in a section which projects out of the lower profile, and comprise a width of approximately 4 mm in an upper section.
