Abstract (en)

[origin: EP1500763A2] The limit system to prevent a sliding drawer (2) to be pulled out from the furniture, has a bolt with an additional swing lock unit against the slide which lies against a shoulder of the mounting unit (9) when the bolt is in the active setting to prevent a slide movement in the closing direction of the drawer. The bolt structure lies to one side outside the movement path of one or two push rods (24,25), with end sections (27,28) at the mountings, and to be in their sliding path in the active setting.
