Abstract (en)
The supporting means include a pair of bracket members (6) for mounting on each of a pair of opposed frame surfaces (4) of a frame structure. In order to bring a screening device from a non-mounted position to a mounted position, the screening device is moved in a mounting direction (A). The cross-sectional dimensions of the bracket member (6) increase in the mounting direction (A) over at least a part of the bracket member. <IMAGE>
