Abstract (en)

[origin: EP1500876A1] The device has a collection unit (12) that receives and evacuates liquid fluid which penetrates in a chamber (6). A controlled passage (141) formed around the collection unit has a transversal section that is adjusted to generate an acceleration of exhaust air flow which penetrates in a section (14) up to a preset speed. Another passage (151) has successive transversal sections adjusted to force the air flow.
