Abstract (en)
[origin: EP1501108A1] The electrical multi-way switch has at least two switching devices (26,26',32, 32',36), each with a cap (32) of elastic material deformable by pressure in a corresponding actuation direction (B1,B2) so as to change a switch state and an actuating element (16) movable between first and second switch settings with which a switch cap can be deformed to change the switch state of the corresponding switch by moving the actuating element to the first or second switch setting.
