Abstract (en)
[origin: FR2839453A1] Use, as a pharmaceutical, of a recombinant novirhabdovirus (NRV) in which the gene (I) encoding the NV protein is inactivated. Independent claims are also included for the following: (1) recombinant NRV in which (I) is inactivated and contains in its genome at least one heterologous gene (II) that encodes a vaccinating antigen (Ag) of an organism pathogenic for fish; (2) cDNA (III) from the genome of the new recombinant NRV; (3) recombinant vector containing (III); and (4) vaccine containing an NRV in which (I) is inactivated.
