Abstract (en)

[origin: WO03095209A1] The invention relates to a flexible lifting element (03) for using on a cylinder (01) of a rotary printing machine, said element comprising - on the end (12) thereof following the production direction (P) of the cylinder - a limb (05) which is folded back approximately at a right angle and is partially reinforced, optionally by a bead. The inventive lifting element is fixed, in the mounted state, to the lateral surface (0) of the cylinder in such a way that it cannot be detached unintentionally, the limb and the reinforcement thereof being hooked, for example, onto the wall (09, 27) of an opening (07) made in the lateral surface of the cylinder.
