Abstract (en)  
[origin: WO03095752A1] The invention relates to a shower which enables different temperature water to flow simultaneously, and a shower system by which means a shower can be taken with only hot or only cold or only mixed water, and from which simultaneously hot and cold water can be obtained. In terms of construction, the shower system consists of a locking device (12, 13) which regulates the water inflow quantities of the hot water and the cold water, a mixing unit (102) which regulates the temperature difference between the two water outflow quantities, and a dual-chamber shower head (19) which enables the water outflow quantities of each channel to be ejected via a plurality of nozzles (20). The construction is designed in such a way as to provide the user with a special shower experience.
