Abstract (en)

[origin: WO03091636A1] Disclosed is a heat exchanger for a refrigerator, comprising a base plate (1), a conduit (2) for a cooling agent, which is arranged such that said conduit (2) is in heat-conducting contact with the base plate (1), and a layer (3) of holding material, which adheres to the plate (1) and the conduit (2) and is made of a bitumen composition. The heat exchanger is produced by stacking the base plate (1), the conduit (2) and a plate made of the bitumen composition, the layer (3) of holding material being formed from said plate by heating and pressing the stack.
