Abstract (en)

[origin: EP1502629A1] The ski binding adjustment can accommodate different sizes of shoe or ski boot. There may be a handgrip or special tool grip (17) at each end of the adjustable ski binding assembly. The grips are connected to sliding plates (5) which can move in guide grooves in the top of the ski. The guide plates have longitudinally-extending grooves (24) and have undercut (23) slots or cutouts (14) with three circular widened portions (15) giving access to the undercut groove.
