Abstract (en)  
[origin: EP1502885A1] The pit cover to bridge the gap between a sheet feed unit and printing press has support elements (1) and at least one side element bridging the gap in variable width. The side element and the support elements are interconnected, and especially fastened together, in such a way that with a displacement of the side element to a larger gap (7) a tensioning force is exerted on the support elements by at least one connecting element. Through at least one connecting element a maximum distance is defined between adjacent support elements or between one side element and one support element.
