Abstract (en)

[origin: EP1502888A2] The application device for the machine transfer of adhesive onto a relatively moved material sheet (3), especially a paper, film or cardboard web, has at least one carrier (1) with a number of small adhesive beads (2) and a controllable feed device which brings the carrier with the adhesive beads into contact with the material web. The application device has a controllable transporting drive for the revolving movement of the carrier. The carrier is mounted on a storage roller (4) and is guided over a pressure roller (7) to a receiving roller (5) which accommodates the used carrier material.
