Abstract (en)
[origin: EP1503026A2] The support bolt (7) has a hollow shaft (8). Electric wires (15) for the lamps (13) pass through the central bore (7a) through the bolt. The head of the bolt (9) has a part-spherical surface (9a) engaging a bearing ring (10) with a male thread engaging a female thread (1c) on a housing (1). This has a thread (1a) engaging a threaded end plug (2) with conical surfaces engaging a clamping member (4). A second clamping member (3) is screwed (1b) onto the housing. Elastomer rings (6) bear against the sides of the glass pane (5). The housing passes through a circular hole (5a) in the glass pane. A protective ring (16) occupies part of the space between the housing and the hole and the other part is occupied by a ring (12) holding the lamps.
