Abstract (en)
[origin: EP1503030A2] The device has an extruded profiled unit with two wings and inner and outer walls. Each wing is delimited relative to a central part (3) by the discontinuity of one wall to fold the wings. Hooking units and a removable retention section maintain the wings in their folded position, and the profiled unit is arranged flat at the time of its extrusion such that an outer side (60) of the profiled unit is contained in a plane.
