Abstract (en)  
[origin: WO03088949A2] The invention relates to a matrix comprising a bioactive component containing phospholipid made of 5 - 98 wt.-% phosphatidylserine and 1 - 90 wt.-% phosphatidylcholine. Additionally, 1 - 94 wt.-% of a vegetal and/or animal fat component, a wax component, a polyalcohol-component and/or additional physiologically compatible additives can be contained. Preferably, the matrix has a permanently elastic aqueous covering and an overall diameter of between 0.3 - 20 mm. Said matrix can be used especially for increasing physical and mental productive capacity and endurance..
