Abstract (en)  
A first and a second baffle (14, 15) are disposed in a distribution chamber (8) defined between an upper wall (5) and a lower wall (6) of an ironing table (2) in an ironing board and they define a rocking element oscillating over a ventilation opening (11a) connected with a ventilation unit (11). Upon command of an outer handle (20), the rocking element can oscillate between two operating conditions in which the effect produced by the ventilation unit (11) is concentrated on a front portion (9) and a rear portion (10) of the ironing surface (2a), respectively. A sleeve board (27) can be selectively connected with the ironing table (2) at laterally opposite positions of the latter so as to enable use to both right-handed and left-handed persons. <IMAGE>
