Abstract (en)
[origin: EP1505218A2] The composite thermal insulation has an insulating layer fitted to the building wall (3). The insulation is composed of a number of mineral wool insulating components (15) which are secured to the wall by recessed plate dowels (7), each with a plate (8) and a shaft (10). The insulation is covered by a reinforced plaster layer (1). A mineral wool plug (14) is inserted into the free space (19) over the dowel plate, under the plaster. The plug is held against the sides of the recess by a friction grip, and is also secured to the dowel plate by an adhesive (11).
