Abstract (en)

[origin: EP1505236A1] The hinge device comprises a single pin and hinge body equipped with a pivot for coupling and centring in opposing orifices of the door and cabinet thereof, and an upper body with a resilient tongue capable of being introduced into a lateral notch of a recess having a mating shape of the cabinet door, allowing a hinge pin retaining position to be achieved which corresponds to its active use and allows easy assembly and disassembly thereof by pressing the resilient tongue to liberate it from its retaining position in the notch of the cabinet door. <IMAGE>
