Abstract (en)
A method of fixing a panel piece (16) in a synthetic door is described. The method comprises the steps of: forming a rebate in the door in the shape of the panel piece (16) to create a panel-shaped area; and locating the panel piece (16) in the panel-shaped area. With a rebate, the edge of the panel piece (16) is not therefore accessible from the non-recessed side of the door. Preferably, one or more mounting pieces are located around the panel piece to assist mounting of the panel piece (16) within the panel-shaped area, and the mounting pieces are fixable to the door.
