Abstract (en)

[origin: EP1505553A2] The system has a domestic center (11) with base software (12.1) with which it requests the identification (15) of a domestic device (14) that has just been addressed. The domestic center obtains the appropriate equipment-specific bus access software (12.2) for the domestic device from a database (18) and stores it once it knows the identification of the device. The database may be stored locally on a disk, or accessed via the internet.
