Abstract (en)

[origin: WO03075781A1] The invention relates to a method and device for identifying surgical instruments, especially dental surgical instruments, by using a stationary geometric arrangement of instrument receiving elements and a corresponding position-based allocation of the instrument to said receiving elements. Said receiving elements are provided in an arrangement of grid-type modules which cooperate with a base unit, wherein only one individual grid-type module is respectively accessible for removing and fitting.
