Abstract (en)
[origin: WO03092830A1] The invention relates to a ski clip, which is used to fasten ski poles (6a, 6b) to skis (7). In general the simultaneous transport of a pair of skis (7) and a pair of ski poles (6a, 6b) poses problems as the use of both hands is required. It is therefore difficult to simultaneously hold the skis (7), ski poles (6a, 6b) and other objects or to hold onto retaining bars in buses and gondolas when transporting skis (7). The disadvantage of attachments for solving said problem in prior art is that the ski pole holders have to be stored separately when not in use and in addition are inconvenient to use. The invention solves said problem by the permanent attachment of a fixing device (1a, 1b) to the ski pole (6a, 6b), whereby a forked clamping piece (5a, 5b) that can be folded out is fastened to said fixing device and a pair of skis (7) can be clamped between the limbs (9) of said piece. By attaching a forked clamping piece (5a, 5b) to each side of a pair of skis (7), not only are the ski poles (6a, 6b) fastened to the skis (7), but the skis (7) are also held together. This permits the skis (7) and ski poles (6a, 6b) to be transported in one hand.
