Abstract (en)

[origin: WO03095238A1] Articles (10) for applying color on a surface that includes a sheet (12) of dry color component having a margin, a front sheet surface, and a rear sheet surface opposite the front sheet surface, and an adhesive (25) on the rear sheet surface for bonding the sheet to the surface. Either the margin of the sheet or the entire sheet is adapted for reducing or eliminating the visual perceptibility of the seam created when the margin is positioned in an overlapping, abutting, or spaced apart relationship with a margin of a juxtaposed second article. The reduction or elimination of the visual perceptibility of the seam may be promoted by a physical mechanism, a chemical mechanism, an optical mechanism, or a combination of these mechanisms.
