Abstract (en)
[origin: WO03098091A1] The invention relates to a device for guiding a fluid into a container (2), especially a bucket, a watering can or similar, whereby said fluid exits from the end of a line, especially a fitting (3). Said device comprises an extendable and retractable flexible hose (4) with an upper inlet end (5) for arrangement on the line end and a lower inlet end (6) for arrangement in or on the container (2). In order to produce a device which is as easy and economical to produce as possible and to simplify the handling of the device, a flexible retaining means (7) is provided with an inlet opening (8) on the upper inlet end thereof (5) for the end of the line, such that the upper inlet end (5) can be placed on the end of the line and is retained in said displaced state on the end of the line.
