Abstract (en)
[origin: WO03100905A1] The invention relates to a device which makes it easier to point an antenna enabling signals transmitted by one or several satellites to be captured. Said device comprises a compass whose body (3) is provided with a system for the fixing thereof (5) on the antenna. According to the invention, the compass comprises a dial which includes the magnetic south and the name of the satellites in their geographical position and the body (3) comprises an indicator (4) for pointing the antenna by simple rotation in the azimuth.
