Abstract (en)

[origin: WO03098870A2] The invention concerns a method for distributing digital data to a plurality of user terminals (2) connected to a service provider via a network (6) transmitting IP data, each user terminal (2) being identified in the network by an IP address and a unique UA address written in the security processor. The inventive method consists in associating with the data to be distributed an access condition defined at the HTTP protocol level.
