Abstract (en)
[origin: GB2404850A] A cover assembly for a rotary washing line comprises a base 10 having a socket 11 for supporting a rotary washing line 15, a mast 16 upstanding from the base in spaced apart relationship from the socket 13, an arm 19 extending from the mast and a cover 20 suspended from the arm to in use overlie a rotary washing line supported by the socket 13. The mast can be swivellably supported in a further socket 14 so that it can be selectively used to overlie the rotary washing line or, for example, shade the sun from an adjoining area [figures 3,4]. A winch mechanism [figures 8,9] may be provided to enable the cover and/or the washing line to be moved between operative and inoperative positions. Preferably the washing line cover is a tiltable parasol.
