Abstract (en)

[origin: WO03099191A1] The invention relates to a connector for packaging containing medical fluids, in particular infusion or transfusion bags. Said packaging comprises a tubular connection part (1) for receiving a spike for the withdrawal of fluid, said part having a lower opening (1a) on the packaging side and an upper opening (1b) on the connection side. A self-sealing membrane (10), which is pierced by the spike, is located in the connection part. The membrane (10) has an upper, annular section (12) leading into a lower, plate-shaped section (14), said annular section of the membrane surrounding the spike in a sealing manner, when the latter pierces the plate-shaped section. The membrane (10) acts as a guide for the spike and also reseals the connector, once the spike has been removed.
