Abstract (en)

[origin: WO03097412A1] The invention relates to a loading device for a car, consisting of a loading base (101) which is arranged in the storage area of a vehicle. The loading base comprises a distancing element (102; 118, 119, 121) which is arranged in a first end area, and a sliding guide (104, 106). The distancing element is configured in such a way that the lower end thereof is engaged inside the sliding guide. The device also comprises a loading edge (110) which is slanted on the second end area thereof in order to support the loading base.
