Abstract (en)  
[origin: WO03100172A1] Disclosed is an automotive milling machine for machining ground surfaces, comprising an engine frame (2), a movable milling drum (8) which is mounted on the engine frame (2), at least one conveying device (14, 18) which is arranged on the engine frame (2) and takes over the milled material (3) from the milling drum (8) at a transfer location (5), and a device (20) sucking off the air that is polluted with dust and fumes. The milled material (3) is enclosed by a duct (16, 16a, 16b) on the at least one conveying device (14, 18), said duct (16) being separated into two sections (16a, 16b). The suction device (20) is connected to the first section (16a) of the duct (16) downstream from the first transfer location (5) and sucks off the air that has been polluted during milling at the milling drum (8) as well as inside the first section (16a) of the duct (16) essentially in the direction in which the material is conveyed.
