Abstract (en)
[origin: WO02090703A2] The invention relates to a method for introducing insulation elements into cavities of profiles, particularly window profiles or door profiles. The profile comprises at least one cavity (12), whereby an insulation element (2) can be introduced into this cavity (12) by means of negative pressure. Before being introduced into the cavity (12) of the profile, the insulation element (2) has a larger external dimension than the internal dimension of the cavity, and the insulation element can be radially compressed and joined to the surrounding wall of the cavity of the profile in a non-positive manner.
