Abstract (en)
[origin: WO03098133A1] The invention relates to an ice preparation unit for a refrigeration device. Said unit comprises a refrigerant circuit and an ice container that is located in a subassembly (3) housed in a refrigeration compartment (1) of the refrigeration device, said container being in thermal contact with the refrigerant circuit by means of a first heat exchanger. A second sub-assembly (4) that is located in a freezer compartment (2) of the refrigeration device comprises a second heat exchanger of the refrigerant circuit. Water in the ice container is cooled by the dissipation of heat from the second heat exchanger to the freezer compartment (2).
