Abstract (en)

[origin: WO03050679A2] A system and method for the transformation of object trees (OB1, OB2), especially in MES systems, wherein the source tree (QB) and target object trees (ZB) are represented in a common meta-object model of a software system, especially a framework (IF). The source object tree (QB) is transformed into the target object tree (ZB) by adjustment. Transformation occurs directly in the object of the meta-object model (component), thereby enabling communication between connected applications by means of pure data exchange.
