Abstract (en)

[origin: EP1508521A1] A labeling machine (1) with a device for centering bottles, wherein each pan (3) has a depressed surface (11) on the bottom of a hollow (13) and is provided with a pin (14) that is pushed by elastic means (15) so as to protrude from the surface (11), means being provided which are adapted to produce the rotary motion of the pan while the pan traces the path comprised between a bottle loading position and a labeling start position, an abutment (24) being further provided which is adapted to support a bottle and is provided with means (25, 26) adapted to produce a translational motion thereof between an upper stroke limit, in alignment with the peripheral plane of the pan, and a lower stroke limit that lies below the depressed surface. <IMAGE>
