Abstract (en)

[origin: EP1508533A2] The container (1) is designed as a bowl of a suitable shape with a border (5) exceeding the bottom and forming a space (3) underneath. Several semi-circular extensions (7) pointing from the lower edge to the center can be used for being held by the gripping elements of the machinery involved in the filling process. A small radial recess (6) in the border (5) facilitates the escape of air and prevents condensation when the additional space is sealed after the insertion of a knife, a fork, or related items.
