Abstract (en)
[origin: WO03103423A1] Garments that utilize complex panel shapes to minimize the total number of panels used, the number of seams, and total seam length. Increasing the complexity of panel shapes tends to make the cutting of panels more difficult and often results in more wastage of material, but the reduction of the number of panels and reduction in the number of seams and total seam length will actually simplify garment production and result in improved garments. Simplifying garment production will in turn generally result in an increase in the rate of production. Reducing seam length and the number of seams also reduces the chances of seams wearing out or splitting.
